

AS-1000F FIXED MOUNT TRAVERSING PRINTHEAD

The AS-1000F is a short range motion controller designed for inkjet printing on stationary products. The end adapter can accommodate CIJ, HP cartridge or other DOD printers. The compact design allows the motion unit to be dropped into tight locations on production lines or fixtured as a table top printing system. The AS-1000F is actuated by any dry contact closure. When activated the controller will provide a dry contact output trigger to the inkjet printer and start the in-out motion. The trigger will be pulsed. The system comes complete with motion actuator, controller, mounting stand with in-out and up-down adjustment, 7' printer trigger cable, and foot switch with a 6' cord.

Equipment Specifications

- Traverse Length 3.5 or 5.5" single speed
- Cycle time in/out 1.2/1.5 sec
- Power 120/230Vac 2 Amps

Standard Control Features

- Low voltage DC controls on traverser
- Isolated switch start
- Isolated Printer Trigger
