

AS1000H HANDHELD CIJ TRAVERSER

INKJET part marking offers the flexibility of quick data changes when marking a variety of products in small lots. However, for an inkjet printer to work either the part or the print head must move. The **AS-1000H** functions as a transporter to move an inkjet print head past a product at a fixed speed while applying the part mark. The unit can be operated as a handheld which allows an operator to mark large or small parts within a 6-15 foot radius of the printer. The **AS-1000H** can also be mounted to a fixed arm to supply a stationary transport. In the fixed mode, the part is held in front of the **AS-1000H** while the operator triggers motion with a foot switch. With two free hands the operator can easily position difficult to mark products.

FEATURES

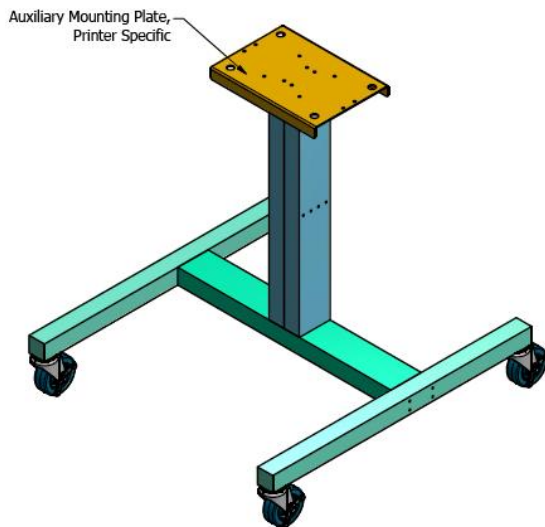

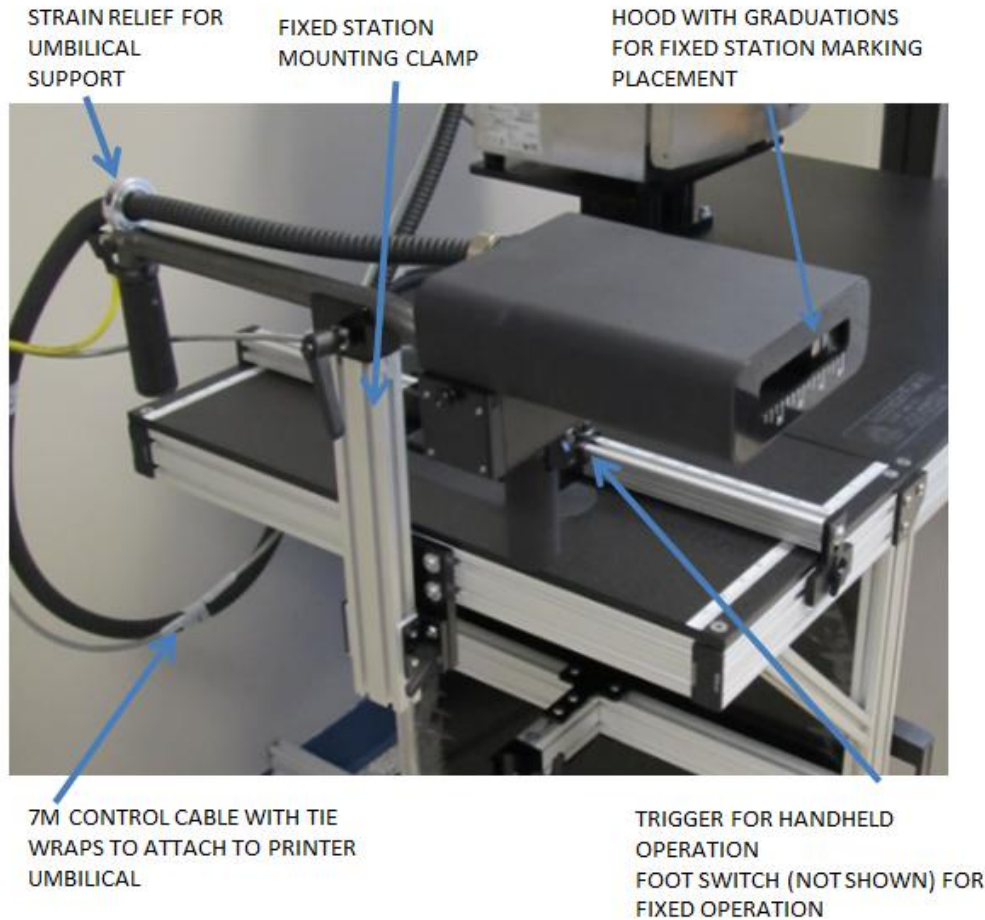

- Works with most CIJ printers
- 3.5" OR 5.5" Traverse distance
- 1.2 Second print cycle
- Handheld arm extension supports the umbilical cable and provides 2 hand holds for easy positioning of the Pistol
- Gun can be held and operated from single trigger handle if desired
- Face plate provides a stable platform to hold against the part when marking
- Face plate and hood are graduated so the location of the part mark is easily controlled
- Print head slides out of holding sleeve for cleaning. Quick release of handle clamp allows total mobility of the umbilical cable without the transporter
