JETMARK I PRO TRAVERSER

EXTEND- RETRACT

The JETMARK I PRO Traverser is a family of short-range motion devices for inkjet printing applications over stationary product. Print head mounts are offered as in line or extend-retract. The end adapter can accommodate CIJ, HP cartridge or other DOD printers. The unit is available in stroke lengths of 2, 4, or 6". The traverse speed is adjustable from 0-12"/sec. The JETMARK I PRO is actuated by any dry contact closure. When activated the controller will provide a 0-30VDC output trigger to the inkjet printer and start the in-out motion. The trigger will be held on until the end of the return stroke. The system comes complete with a 12" adjustable mounting stand, motion actuator, controller, 12' print trigger cable, and foot switch with a 6' cord.
